

NextGen Lab 4 –CSS data table

Objective:

Create a valid, properly formatted HTML5 data table, fully styled with CSS.

Process:

1. Create a new github repository for your lab 4.
2. Populate it with a copy of the lab 3 html table you created for NASA planet info.
3. Create an external style sheet and link it to an html file.
4. Use css to style the page and table. I don't want it to look like the default browser styling on anything.
5. Trying to make 960px centered layout. Create a <div> around your table that is 960px wide.
6. Everybody's page and tables should look unique.
7. Add the following CSS:
 - ✓ table (font-family, font-size, font-style, font-weight, line-height, text-align, overflow)
 - ✓ th (border, text-align, height, background-color, padding)
 - ✓ tr:hover td (background-color, border, color)
